

## ArcFM™ Viewer with Redliner Extension Streamlines enterprise integration of field-sourced redlining and sketching

Utility personnel need the ability to quickly layout sketches and markup map features for update as part of their daily work. Telvent's Redliner Extension for ArcFM Viewer provides simple yet comprehensive redlining and sketching functionality within the ArcFM Enterprise Solution. Users can now view, query, trace, and quickly markup data to help optimize the investment in maintenance and construction from the facility network.

With the Redliner extension, utility users have all of the functionality of ArcFM Viewer plus the added ability to redline, sketch, and place graphics to support initial design, inspection work, or map adjustments. Users can initiate redlining sessions using ArcFM's Session Manager in the office or in the field, and apply a combination of digital ink and graphics for markups. Sessions can be sent back to the enterprise where GIS mapping workflows incorporate those updates. A graphics palette allows personnel to quickly and

easily place graphic and standard text elements in support of sketch editing and design.

The Redliner extension can be deployed by both field and enterprise-based desktop users in cases where full geodatabase editing is not necessary.

### Benefits

- Cost Effective: Economical solution that fits into the utility enterprise GIS workflow for mobile and desktop
- Easy to Use: Support for digital ink and pick-and-place graphics and text
- Leveraging the ArcFM Solution: Offers the power of ArcFM Viewer plus redlining and sketching

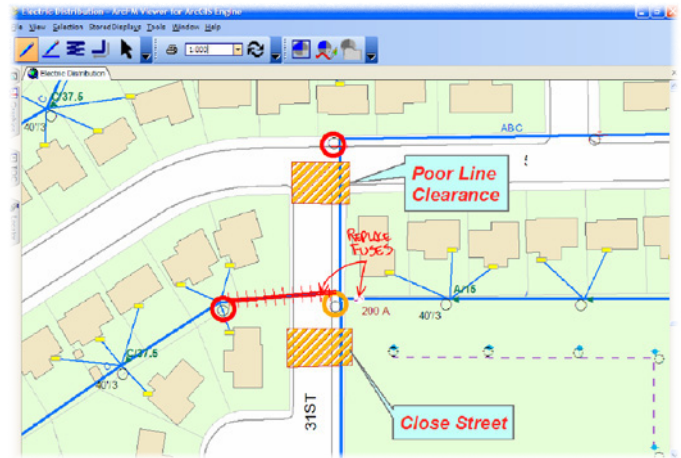

ArcFM Viewer with Redliner Extension comprises the functionality found in ArcFM Viewer with the addition of the following components:

- Graphics tab allows users to select standard graphic elements or text for placement on the map
- Graphics favorites library allows users to create standard text and graphic elements
